Week3_Day3_Hands_On_Koduru_Ushasree

Level-1: Problem 1 - Basic Customer Order Report

Scenario:

The store manager wants a simple report showing customer orders along with their order dates and status. This report will help track pending and completed orders.

Requirements

1. Retrieve customer first name, last name, order_id, order_date, and order_status.

2. Display only orders with status Pending (1) or Completed (4).

3. Sort the results by order_date in descending order.

Technical Constraints

- Use SELECT statement.

- Use WHERE clause with logical operators (AND/OR).

- Use ORDER BY clause.

- Use INNER JOIN between customers and orders tables.

Query :-

```sql
CREATE DATABASE EcommDb

USE EcommDb;

SELECT c.first_name, c.last_name, o.order_id, o.order_date,o.order_status
FROM customers c INNER JOIN orders o
ON c.customer_id = o.customer_id
WHERE o.order_status = 1
   OR o.order_status = 4
ORDER BY o.order_date DESC;
```

Output :-

100 % No issues found

Technical Requirements :-

The query retrieves customer and order details by performing an INNER JOIN between the customers and orders tables using the customer_id column. It filters records using the WHERE clause with logical OR operator to display only Pending (1) and Completed (4) orders. The result set is sorted in descending order of order_date using the ORDER BY clause to show the most recent orders first.

Level-1: Problem 2 - Product Price Listing by Category

Scenario:

The sales team wants a product listing categorized by product category along with brand details to understand product distribution.

Requirements

1. Display product_name, brand_name, category_name, model_year, and list_price.

2. Filter products with list_price greater than 500.

3. Sort results by list_price in ascending order.

Technical Constraints

- Use SELECT statement.

- Use WHERE clause.

- Use ORDER BY clause.

- Use INNER JOIN between products, brands, and categories tables.

Query :-

```
use EcommDb

SELECT p.product_name, b.brand_name, c.category_name, p.model_year, p.list_price
from products p INNER JOIN brands b
ON p.brand_id = b.brand_id
INNER JOIN categories c
ON p.category_id = c.category_id
WHERE p.list_price > 500
ORDER BY p.list_price;
```

Output :-

213	Trek Domane SLR 9 Disc - 2018	Trek	Road Bikes	2018	11999....

Technical Requirements :-

The query retrieves product details by performing INNER JOIN operations between the products, brands, and categories tables using their respective foreign key relationships. It filters products with a list_price greater than 500 using the WHERE clause and sorts the result set in ascending order of list_price using ORDER BY. This demonstrates multi-table joins, numeric filtering, and proper result ordering.

Level-2: Problem 1 - Store Wise Sales Summary

Scenario:

The regional manager wants to analyze total sales generated by each store.

Requirements

1. Display store_name and total sales amount.
2. Calculate total sales using (quantity * list_price * (1 - discount)).
3. Include only completed orders (order_status = 4).
4. Group results by store_name.
5. Sort total sales in descending order.

Technical Constraints

- Use INNER JOIN between stores, orders, and order_items tables.
- Use GROUP BY clause.
- Use aggregate functions such as SUM().
- Use WHERE clause for filtering.
- Use ORDER BY clause.

Query :-

```
use EcommDb

SELECT s.store_name,
 SUM(oi.quantity * oi.list_price * (1 - oi.discount)) AS total_sales
FROM stores s
INNER JOIN orders o
ON s.store_id = o.store_id
INNER JOIN order_items oi
ON o.order_id = oi.order_id
WHERE o.order_status = 4s
GROUP BY s.store_name
ORDER BY total_sales DESC;
```

Output :-

100 % No issues found

Results Messages

	store_name	total_sales
1	Baldwin Bikes	4701209.5663
2	Santa Cruz Bikes	1255491.6489
3	Rowlett Bikes	705914.0289

Technical Requirements :-

The query calculates total sales generated by each store by performing INNER JOIN operations between the stores, orders, and order_items tables using their respective foreign key relationships. It filters only completed orders using the WHERE clause (order_status = 4). The total sales amount is calculated using the expression quantity * list_price * (1 - discount) and aggregated using the SUM() function. The results are grouped by store_name using GROUP BY and sorted in descending order of total sales using ORDER BY.

Level-2: Problem 2 - Product Stock and Sales Analysis

Scenario:

The inventory manager wants to compare stock availability and total quantity sold for each product.

Requirements

1. Display product_name, store_name, available stock quantity, and total quantity sold.

2. Include products even if they have not been sold (use appropriate join).

3. Group results by product_name and store_name.

4. Sort results by product_name.

Technical Constraints

- Use LEFT JOIN between stocks and order_items.

- Use INNER JOIN with products and stores tables.

- Use GROUP BY clause.

- Use SUM() aggregate function.

- Use ORDER BY clause.

Query :-

```sql
SELECT p.product_name,
       s.store_name,
       st.quantity AS available_stock,
       ISNULL(SUM(oi.quantity), 0) AS total_quantity_sold
FROM stocks st
INNER JOIN products p
    ON st.product_id = p.product_id
INNER JOIN stores s
    ON st.store_id = s.store_id
LEFT JOIN order_items oi
    ON st.product_id = oi.product_id
GROUP BY p.product_name, s.store_name, st.quantity
ORDER BY p.product_name;
```

Output :-

Technical Requirements :-

The query retrieves product stock and sales information by performing INNER JOIN operations between stocks, products, and stores tables to ensure valid product and store relationships. A LEFT JOIN is used with the order_items table to include products that have not been sold. The total quantity sold is calculated using the SUM() aggregate function, and NULL values are handled using ISNULL() to display zero for unsold products. The results are grouped by product_name, store_name, and stock quantity and sorted by product_name.
